Sitting position - patient ready to be moved in/out the operation theatre

Head-rest positioning

Surgical ophthalmic chair:

SC-1 has been designed to ensure maximum comfort for the patients and surgeons during ophthalmic surgical procedures. Full range of patient positioning, from sitting to lying position, gives unprecedented opportunity to position patients at any age in a comfortable way. A unique design of the patient's head rest, gives the surgeon precise control over the patient's head during surgical procedures. Ergonomical shape of the head-rest, support the patient's neck thus controlling in position and comfort throughout the time of entire surgery. A robust construction of the stainless-steel base with special casters allow the surgical table to be freely moved in and out the operation theatre with the patient sitting on. Battery/mains operated controls assure maximum flexibility on the system.
