Operator's chair OC-1:

Ergonomics, functionality and comfort. OC-1 has been designed to ensure maximum comfort and functionality for the ophthalmic surgeons. Wide variety of arms support, back rest and seat height adjustments gives the opportunity to achieve the optimum sitting position during ophthalmic procedures. Ergonomically positioned, big up/down switches, operated by surgeon's feet, ensure easy height adjustment, saving a space under an operating table. A robust chair base is equipped with three heavy-duty casters for easy movement around the operation theatre. The base shape allows the OC-1 to fit most of the operating tables available on the market.
