### Ophthalmic stools:

Specially designed group of stools used for patients as well as for ophthalmic doctors. Type T-P is used for ophthalmic patients and is equipped with a pneumatic height control, flat seat and stable legs, assuring stability during examination. Type T-L is a stool with specially formed doctor's seat with ergonomic half-backrest and a pneumatic height control, designed for use by doctors, equipped with castors allowing comfortable movement among the ophthalmic devices installed at doctor's practice. Type T-S is also designed for use by doctors, but has an ergonomic saddle shape seat with up/down and tilt control. All of the stools come in two sizes, high and low seat.
